“

Artificial stone product is deeply loved by high-end designer because of its feature of easy to shape and high strength structure. As a manufacturer of high-end artificial stone products, its products have been sold to many countries and regions such as Europe and America so far. In the domestic high-end hotel market, we have cooperated with the Four Seasons Hotel, Intercontinental hotel, Mangrove Resort Hotel and so on.

”

Being customizable is the biggest feature of Solid Surface/Concrete Products

About Solid Surface

Solid surface is a synthetically manufactured material, composed of a blend of natural minerals and synthetic or plant-based resins. The mixture can be poured and seamlessly molded into virtually any shape and size. The material is a popular choice for bathtubs due to its luxuriously smooth texture and heat-retention properties; solid surface tub walls are warm to the touch so that people can bathe for longer without adding hot water.

Features

Seamless, one-piece surface

Nonporous and hygienic; naturally resistant to stains, mildew, and mold

Easy to clean; low-maintenance

Easily repairable finish; retains a brand-new appearance for years

Smooth, velvety texture (we also offer a high-gloss finish option)

Large variety of shapes, colours and sizes for option and highly customizable (can be made as per clients' unique design requirements)

Highly durable

Retains heat & Warm to touch.

Eco-friendly and recyclable

Why Highly Customizable

Due to the moldable properties of solid surface, the tubs are available in a wide range of shapes, sizes, and installation options. Choose from freestanding, drop in, undermount, alcove, and even corner tubs in every conceivable shape: classic oval or rectangular tubs, sculpted hourglass and slipper silhouettes, or space-conserving round and square tubs, in sizes from the diminutive to the oversized. People can even opt for a solid surface air tub to turn ordinary bath time into extraordinary leisure time.

Why Easy to Clean

Solid surface is naturally antibacterial and easy to clean; it resists mold, mildew, and staining. While it's not impervious to scratches or abrasions, surface damage is easy to repair.

Artificial stone composition

1. 100% PMMA (Pure acrylic) Solid surface

PMMA RESIN(43%), ALUMINUM HYDROXIDE POWER(52%), PIGMENT AND FILLER(5%)

2. Modified Acrylic Solid surface

PMMA RESIN(10%), POLYESTER UNSATURATED RESIN(33%), ALUMINUM HYDROXIDE POWER(52%), PIGMENT AND FILLER(5%)

3. Polymarble solid surface (Gelcoat)

POLYESTER UNSATURATED RESIN(30%), STONE POWDER(60%), PIGMENT AND FILLER(10%)

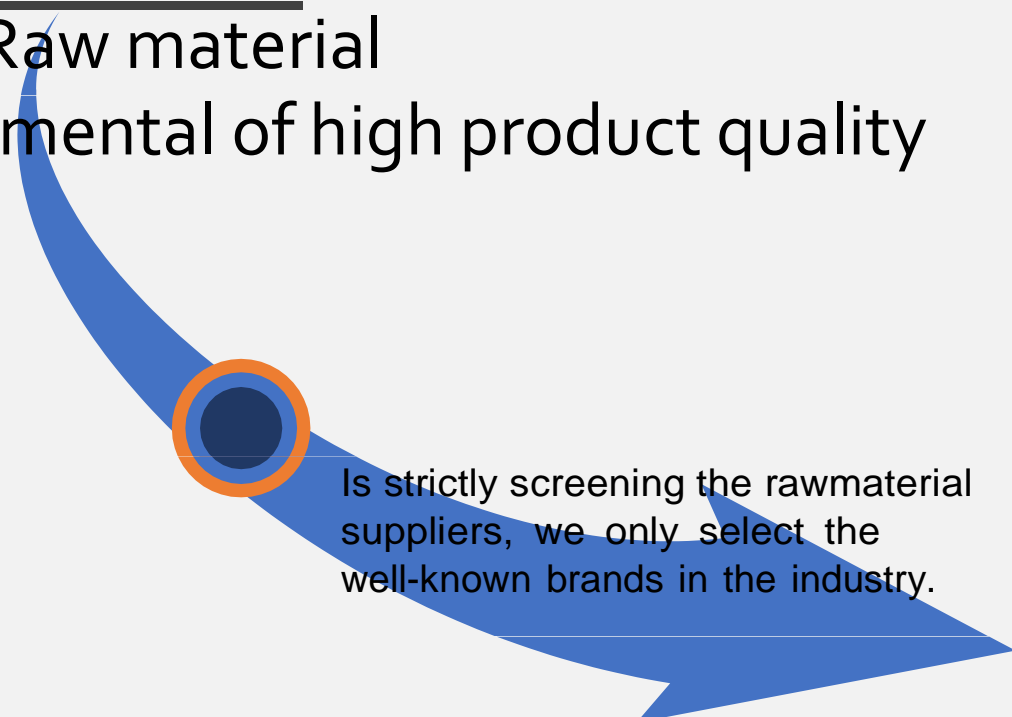

Production Process Summary

Resin & Filler Mix ---> Add Pigment ---> Add Aluminum hydroxide powder mix
---> Eliminating air bubbles by vacuum ---> Pour the fully mixed material into the
mold ---> Vacuum ---> Remove the mold ---> Oven curing
---> QC Inspection ---> Repair any pores / defects ---> Sanding/Polishing
---> Oven Curing ---> QC Inspection ---> Packaging/Labeling ---> Warehouse.

Premium Raw material -the fundamental of high product quality

Is strictly screening the rawmaterial suppliers, we only select the well-known brands in the industry.

Craftsmanship built over 15 years

The spirit of the craftsman is rooted in every aspect of the production.

The founder and key position workers have more than 10 years of experience.

Responsive to customer requests
